

Allianz Rohstofffonds - A - EUR

Indirect equity investments in the metals and mining segment

Investment Objective

Allianz Rohstofffonds (feeder fund) invests at least 95% of its assets in Allianz Global Metals and Mining (master fund). This fund invests in the global equity market, primarily in the natural resources segment with the aim of attaining capital growth in the long-term. In effect, the greatest possible participation of the feeder fund in the master fund and its performance is sought.

Opportunities

- + High return potential of stocks in the long run
- + Investments specifically in the natural resource segment (focus on metals and mining) through participation in the master fund
- + Currency gains possible
- + Additional yield potential through single security analysis and active management of the master fund

Risks

- High volatility of stocks, losses possible. The volatility of fund unit prices may be strongly increased.
- Underperformance of the raw materials sector possible
- Currency losses possible
- Success of single security analysis and active management of master fund not guaranteed

FOR FUND DISTRIBUTORS AND PROFESSIONAL INVESTORS ONLY

- 1) Fund manager of the master fund
- 2) Calculation basis: net asset value per unit (excluding front-end load); distributions reinvested. Calculation according to BVI method. Figures from the past are no guarantee of future performance. Any front-end loads will reduce the capital invested and weigh on the performance. All performance figures for dates earlier than 16 November 2012 refer to the time before the feeder structure of the Allianz Rohstofffonds was implemented. The fund was launched on 25 July 1983. This does not mean that the Allianz Rohstofffonds would have registered a similar performance if it had been launched with its current feeder structure at that date.
- 3) Benchmark history: until 31/12/2014 EUROMONEY GLOBAL MINING RETURN, until 31/12/2011 MSCI WRLD/METALS & MINING TOTAL RETURN (NET) IN EUR, until 31/12/2005 MSCI World Constrainers & Packaging (151030), MSCI World Metals & Mining (151040) and MSCI World Paper & Forest Products (151050) Total Return (Net) MSCI-weighted.
- 4) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.
- 5) Volatility measures the fluctuation range of the fund's performance over a specified period of time.
- 6) Measure of the proportion of fund assets that is invested differently from the benchmark.
- 7) The dividend yield corresponds to the expected dividend divided by the current price of the share, expressed as a percentage. (eDiv/share price) where: eDiv = product of the last dividend payment and the number of expected dividend payments per year (e.g. the expected dividend for a share with quarterly dividend payment corresponds to the dividend for the last quarter times four). The dividend yield depends both on the amount of the dividend and the current price of the share. Both these key variables may be subject to constant change. The dividend yield is only a snapshot based on the current amount of the dividend and the current share price; **as a result, it is not suitable as an indicator of the future performance of an equity fund.**
- 8) Allianz Rohstofffonds (feeder fund) invests at least 95% of its assets in Allianz Global Metals and Mining (master fund). The fund structure shows the asset breakdown at master fund level. The current cash position of the feeder fund is 0.76%.
- 9) This is for guidance only and not indicative of future allocation.
- 10) In addition to the fee for management of the Feeder Fund, fees and expenses are also charged for the shares of the Master Fund held by the Feeder Fund. The Master Fund's management company levies the following fees from the Feeder Fund, i.e. indirectly from its investors: All-in fee (0.45% p.a.) of share class F (EUR) of the Master Fund, Taxe d'abonnement (Luxembourg tax on the Master Fund's assets – 0.01% p.a.), Transaction costs, auditing costs and other expenses that may be charged to the Master Fund.
- 11) If the acquisition of Fund units is subject to a sales charge, up to 100% of such sales charge may be collected by the distributor; the exact amount shall be mentioned by the distributor as part of the investment advisory process. This also applies to any payment by the Management Company of an ongoing distribution fee from the all-in fee to the distributor. The all-in fee includes the expenses previously called management, administration and distribution fees.
- 12) TER (Total Expense Ratio): Total cost (except transaction costs) charged to the fund during the last financial year.
- 13) The TER includes indirect costs of Taxe d'Abonnement of 0.01% p.a. of the master fund share class F. As the Fund invested on its fiscal year end day more than 20 % of its assets in such other UCITS or UCI (target funds) which publish ongoing charges, the ongoing charges of those target funds are taken into account when calculating the Ongoing Charges of the Fund on its fiscal year end. However, if target funds do not publish their own ongoing charges, it is not possible to take into account these charges when calculating Ongoing Charges.

Disclaimer

Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. Allianz Rohstofffonds is an open-ended investment fund organised under the laws of Germany. The value of the fund units/shares may be subject to highly elevated volatility. Past performance is not a reliable indicator of future results. If the currency in which the past performance is displayed differs from the currency of the country in which the investor resides, then the investor should be aware that due to the exchange rate fluctuations the performance shown may be higher or lower if converted into the investor's local currency.
